- BLOCKHOUSE
- LIGHT ARMORED VEHICLES

LAÇİN

LAÇİN is a smart guidance kit that can be used against fixed and moving targets with an imaging infrared seeker and tactical data link. Laçin, which can be used by the pilot as “man-in-the-loop”, is compatible with MK-82 general purpose bombs. In addition to the Imaging Infrared Seeker Head, it uses Inertial Measurement Unit (IMU), making it a smart weapon system.
